

Who?

Airport vehicle logistics
Managers

What?

Software to help you design
your apron and runway
markings

Why?

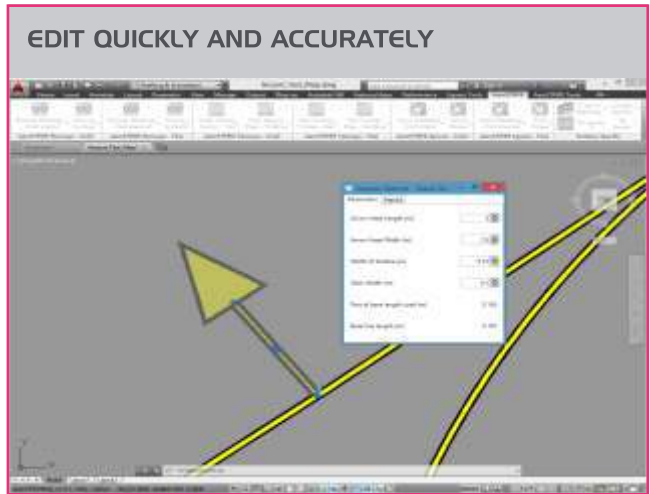

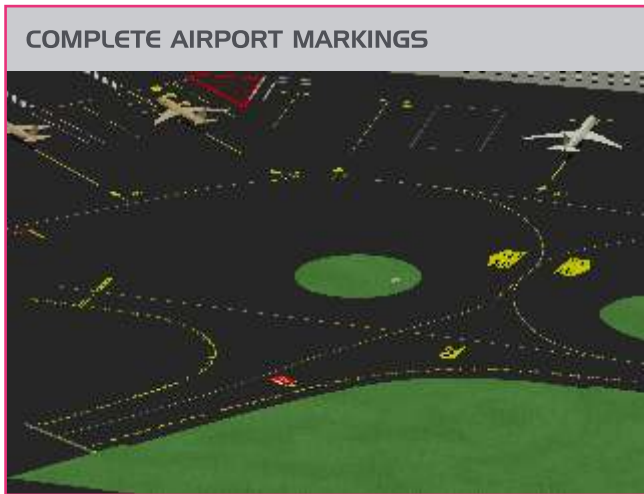

Accurately draw airside
markings, with 'grip' editing
allowing reworking of designs

WHO IS AEROSTRIPE FOR?

AeroSTRIFE is designed for airport vehicle logistic managers.

WHAT IS AEROSTRIPE?

AeroSTRIFE is airside marking design software that enables airport controllers to plan and visualize the markings required with ease, accuracy and speed.

WHY CHOOSE AEROSTRIPE?

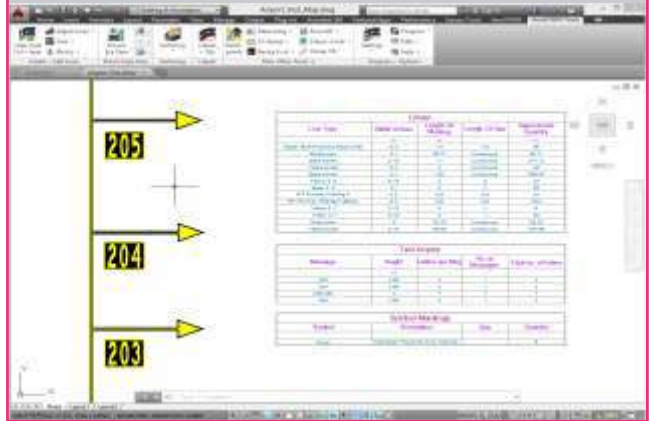

AeroSTRIFE can quickly calculate the amount of each type of marking drawn to produce a table of quantities.

This table can also generate cost estimates from schemes where rates are available. To assist with visualization and safety audits you can quickly generate 3D views as seen from the aircraft or how the ground crew would see them.

You can enhance your drawings with 3D features to account for buildings, walls and signs.

When complete, AeroSTRIFE designs can be exchanged with other organizations.

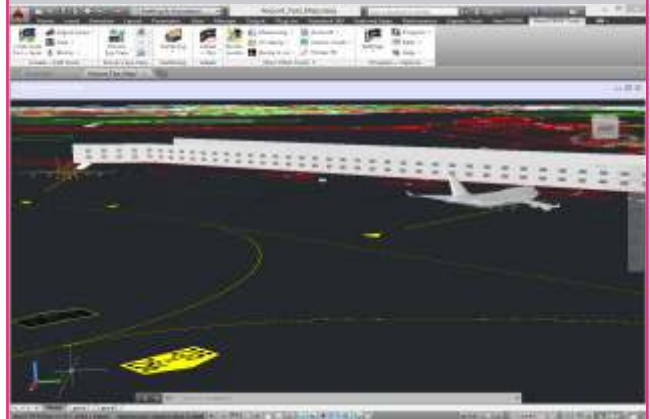

QUANTITY TAKE-OFF

AEROSTRIPE AT A GLANCE

- Uses rule based markings to ensure adherence to ICAO and FAA standards
- Draws markings with black outlines instantly, saving you time
- Entire runways can be created in one go
- Full control over visual styles (colors and layers)
- 3D view routine ensures markings are clearly seen and understood
- Keysoft Solutions support services include upgrades to your software and support via telephone, email and remote desktop
- Keep up to date with standards and legislation by attending training sessions and screen share events

VISUALIZE AND COMMUNICATE DESIGN INTENT

“Using AeroSTRIFE’s rule-based markings, set within the parameters of the standards we work to, we’ve found that we can quickly achieve compliance much more quickly and effectively.”

Andrew Elliot
